FILE TEMPLATE TOPOLOGI CISCO PACKET TRACER

- ▶ File template topologi jaringan yang digunakan untuk mengujicoba route summarization dapat diunduh di alamat <https://goo.gl/a7WixM>.
- ▶ File template ini dapat dibuka menggunakan aplikasi Cisco Packet Tracer versi 6.2 Didalamnya memuat 3 file masing-masing untuk template konfigurasi route summarization di routing protocol OSPF, EIGRP dan RIPv2.
- ▶ File template telah memiliki konfigurasi dasar untuk setiap perangkat baik PC maupun router seperti pengalamanan IP pada setiap interface yang diatur secara manual.

OSPF NETWORK TOPOLOGY

KONFIGURASI OSPF DI ROUTER_DOSEN

1. Berpindah dari user mode ke privilege mode

```
ROUTER_DOSEN>enable
```

2. Berpindah dari privilege mode ke global configuration mode.

```
ROUTER_DOSEN#conf t
```

3. Mengaktifkan routing protocol OSPF dengan process ID 1.

```
ROUTER_DOSEN(config)#router ospf 1
```

4. Mengatur alamat jaringan pada router yang menjadi bagian dari jaringan OSPF.

192.168.0.0/30 dituliskan menggunakan wildcard subnet

```
ROUTER_DOSEN(config-router)#network 192.168.0.0 0.0.0.3 area 0
```

Network A, B, C dituliskan menggunakan alamat network classfull 172.17.0.0/16 dengan wildcard network

```
ROUTER_DOSEN(config-router)#network 172.17.0.0 0.0.255.255 area 1
```

5. Berpindah ke privilege mode

```
ROUTER_DOSEN(config-router)#end
```

Terlihat terdapat 3 entri di routing tabel terkait network yang terhubung langsung dengan Router_Dosen yang didapat oleh Core_Router melalui OSPF (Kode O – OSPF).

PERHITUNGAN ROUTE SUMMARIZATION

- ▶ **Route Summarization** adalah menentukan jumlah bit terpanjang yang sama di semua alamat subnet dengan mengkonversi alamat tersebut ke format biner.
- ▶ Oktet 1 dan 2 dari Network A, B, dan C memiliki nilai yang sama. Mulai berbeda dari octet ke 3 sehingga lakukan konversi nilai decimal di octet ini ke biner.

Network A : 172.17.25.0/24 → 172.17. **000110**01.0

Network B : 172.17.26.0/24 → 172.17. **000110**10.0

Network C : 172.17.27.0/24 → 172.17. **000110**11.0

- ▶ Jumlah bit terpanjang yang sama adalah: 22 bit, sehingga ringkasannya adalah 172.17.24.0/22. Nilai **22 bit diperoleh dari**:

Oktet 1: 8 bit,

Oktet 2: 8 bit,

Oktet 3: 6 bit

Sehingga $8 + 8 + 6 = 22$

- ▶ Nilai **172.17.24.0 diperoleh dari**:

Oktet 1 dan 2 yaitu **172.17** dari ketiga network sudah sama.

Oktet 3 hanya 6 bit pertama yang sama yaitu **00011000** sehingga dikonversi ke decimal menjadi **24**.

Route summarization ini merupakan hasil ringkasan dari 3 network yang terhubung langsung dengan ROUTER DOSEN yaitu Network A, B dan C yang didapat oleh CORE_ROUTER melalui RIP (Kode R – RIP).

MENONAKTIFKAN AUTOMATIC NETWORK SUMMARIZATION DI ROUTER_DOSEN DAN CORE_ROUTER

- ▶ Berpindah ke mode *global configuration*

```
# conf t
```

- ▶ Berpindah ke *router configuration mode* untuk RIP

```
(config)# router rip
```

```
(config-router)# no auto-summary
```

- ▶ Berpindah ke mode privilege

```
(config-router)# end

- ▶ Memverifikasi hasil penonaktifan **automatic network summarization**

```
# show ip protocols
```

Perhatikan outputnya akan terlihat pesan "**Automatic network summarization is not in effect**".

KONFIGURASI MANUAL ROUTE SUMMARIZATION PADA RIPv2 DI ROUTER_DOSEN

Sintak penulisan *RIP manual route summarization* pada **interface configuration** adalah:

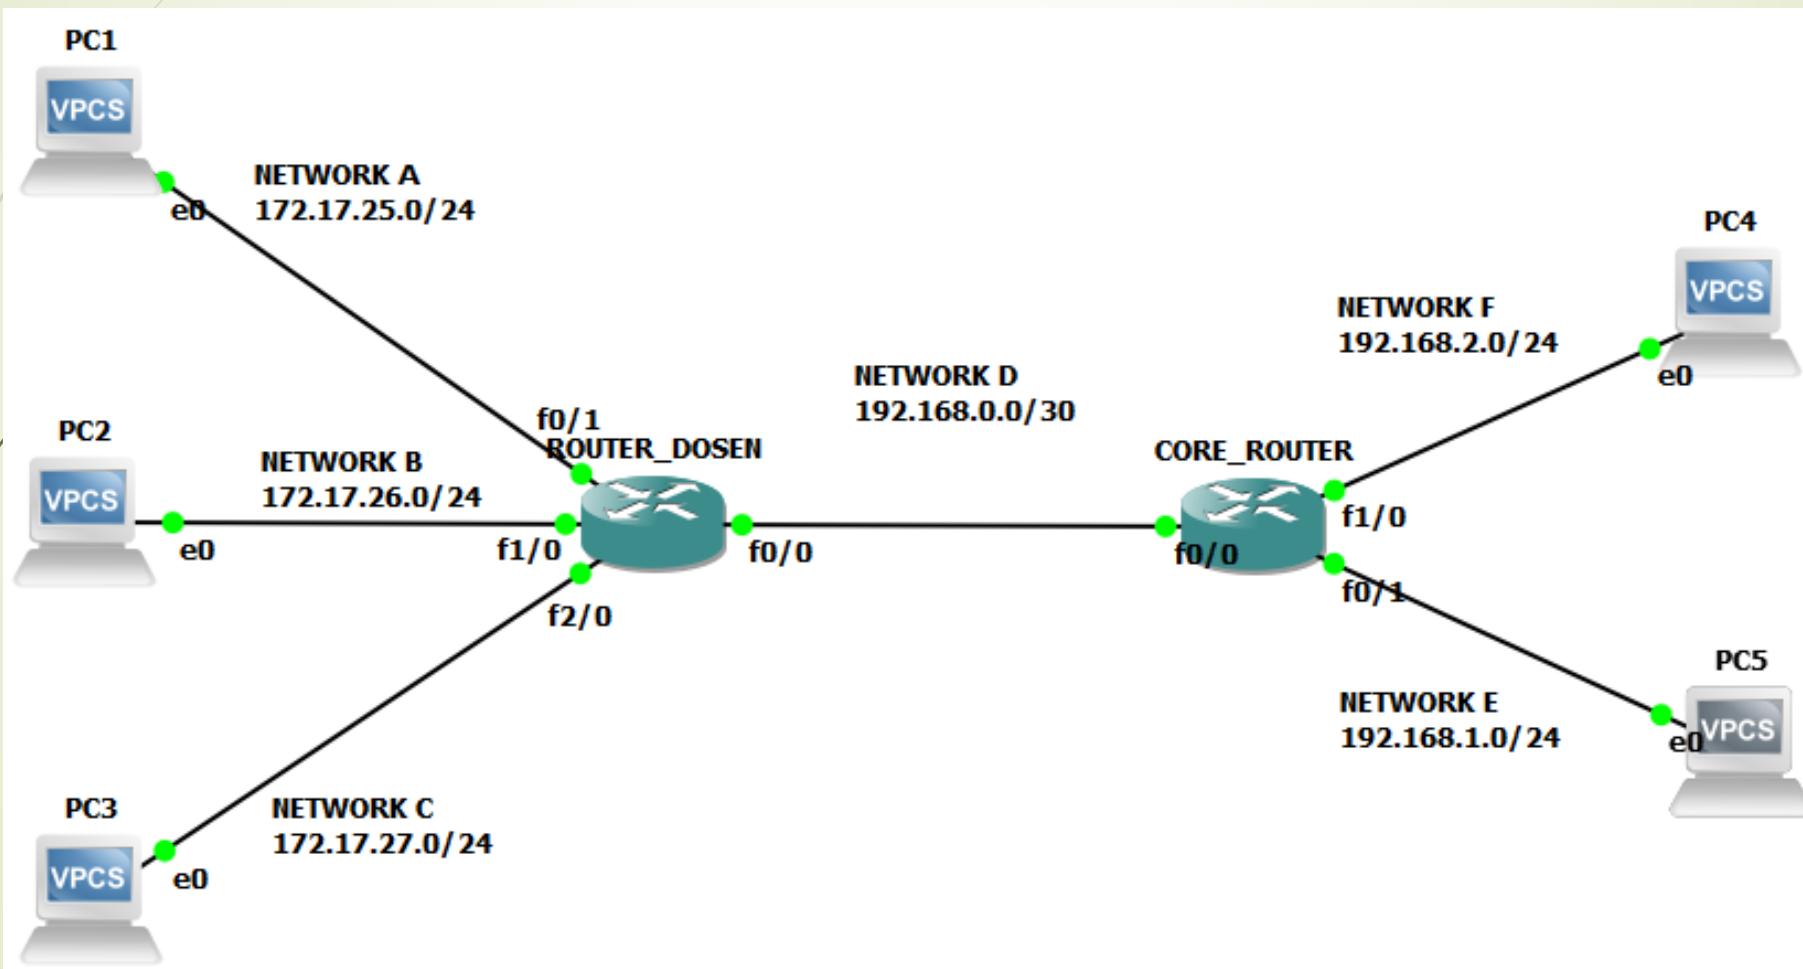

```
ip summary-address rip alamat-ringkasan subnetmask-ringkasan
```

Berdasarkan gambar topologi jaringan yang digunakan maka *interface* sebagai lokasi penerapan *manual route summarization* adalah **interface GigabitEthernet0/0** yang menghubungkan **ROUTER_DOSEN** ke **CORE_ROUTER**. Konfigurasinya terlihat sebagai berikut:

```
ROUTER_DOSEN(config)# int gi0/0
ROUTER_DOSEN(config-if)#ip summary-address rip 172.17.24.0
255.255.252.0
```

Namun karena keterbatasan fitur yang dimiliki oleh CISCO PACKET TRACER maka ujicoba *RIP manual route summarization* dicontohkan menggunakan Cisco IOS yang telah dikonfigurasi pada GNS3.
